

BLUE CRYSTAL DE-ICER THE ULTIMATE HIGH PERFORMANCE DE-ICER (AVAILABLE FOR ALL APPLICATIONS)

SEE THE DIFFERENCE

Blue Crystal De-Icer is a high performance de-icing product that contains a blend of natural rock salt, magnesium chloride and an agricultural by-product.

Additionally, a unique blue coloring agent is added for visibility and, as our signature color, identifies it as a versatile anti- and de-icing performance product that melts to -20°F.

FEATURES & BENEFITS

- Performs quickly, efficiently and is extremely effective in low temperatures –melting to -20° F
- Signature blue color makes it visible so less material and fewer applications are needed – a 30-50% material reduction over rock salt alone
- Maintains a melting effect after the initial application or storm event
- Flows freely in sub-freezing conditions and has better road adherence (less bounce and scatter)
- Ideal for treating black ice on roads and bridge surfaces
- Environmentally friendly, it is less corrosive than rock salt and calcium chloride blends, and releases less chloride into the environment
- Prevents snow and ice from bonding to the pavement when applied correctly before a storm event
- Blue Crystal De-Icer is available in bulk by the truckload
